Chart Key

Youth & Adults

Adults Only 18+

Male Only

* Co-occurring Disorders: have substance use and mental health disorder. For these agencies the individuals must have a primary diagnosis of substance use.

SERVICE DEFINITIONS

SUBSTANCE USE SERVICES

Detoxification (Detox): Medical treatment conducted under the supervision of a physician to systematically reduce the amount of the addictive substance in a patient's body. There is some level of monitoring of the withdrawal symptoms. This can be in an inpatient or outpatient setting. Patients must meet criteria to be admitted into inpatient detox.

Rehabilitation (Rehab): A facility for ongoing treatment after the patient has been detoxed. Usually the patient stays overnight (inpatient), but it can be an outpatient setting.

Outpatient Detox (a.k.a. Ambulatory Detox or Ancillary Withdrawal): A facility for safe withdrawal of substances and ongoing treatment, however the patient does not stay overnight. This may include Medication Assisted Treatment (MAT).

Inpatient Detox: 24 hour per day monitored medical acute care services in hospital or residential setting for safe withdrawal and transition to ongoing treatment.

Inpatient Rehab: 24-hour, structured, short-term, intensive treatment services provided in a hospital or free-standing facility staffed with physicians, nurses, and clinical staff 24/7. The patient stays in this facility overnight.

Outpatient Clinic: Clinics that provide treatment services to individuals who suffer from substance use disorders and their family members and/or significant others. Outpatient services may be delivered at different levels of intensity responsive to the severity of the problems presented by the patient. The patient does not stay overnight at the clinic.

Medication Assisted Treatment: The use of medications in combination with counseling and behavioral therapies for the treatment of substance use disorders.

Syringe Exchange Program: Programs that provide free sterile syringes and collect used syringes from injection-drug users to reduce transmission of blood borne pathogens, including HIV, Hepatitis B, Hepatitis C.

Naloxone Training and Kit: Programs target people who are at risk of opioid overdose and/or likely to be bystanders during an overdose to educate them on how to prevent an overdose from occurring, and to prevent opioid related over intoxication from progressing to a fatal overdose by seeking help, rescue breathing and administering naloxone.

Peer Services: Persons with lived experience trained to work with people.

Family Support: Services that provide education, counseling, and other assistance to family/friend of a person with substance use issues.

Resource and Recovery Centers: Centers where a person can get information on many types of treatment, recovery, and support options including peer support.

Crisis / Withdrawal Stabilization: Activities aimed at stabilizing occurrences of individual/family crisis where it arises. Services include are screening, assessment, stabilization, triage, and/or referral to an appropriate program or programs.

Care Management: Care coordination, health education and management support, transition services, direct social service support, individual and family support via New York State Health Home or the Staten Island CARES program services.
